

SUMMARY

Junior at VNU-HCMUS (GPA: 8.73, TOEIC 800) specializing in Java/Spring Boot backend engineering. I thrive in collaborative environments and actively leverage AI tools to accelerate development workflows and optimize problem solving. With a strong technical foundation proven through CTF competitions, I am seeking an internship or fresher role to build robust solutions alongside a dynamic engineering team.

EDUCATION

Year	Degree/Certificate	Institute	CGPA/Percentage
2020-2023	High School Diploma	Hoang Le Kha High School for the Gifted	8.50
2023-2027	Bachelor of Information Technology	VNU-HCM, University of Science	(Current) 3.76 / 8.73

TECHNICAL SKILLS

- **Languages & Web:** Java (Advanced), JavaScript, HTML/CSS, Python, C/C++
- **Frameworks & Integration:** Spring Boot 3, REST/SOAP APIs, Microservices, System Integration
- **Databases & Messaging:** PostgreSQL (Advanced), MSSQL, Oracle, RabbitMQ, ready to adopt Kafka
- **Tools, DevOps & Mindset:** Git, Docker, JUnit (Unit and Integration Testing), SDLC, SOLID, Clean Code

KEY COURSES TAKEN

- **Software & Development:** Object-Oriented Programming, Java Application Programming, Web Development, Software (System) Design
- **Core Computer Science:** Data Structures and Algorithms, Computer Systems, Databases, Advanced Databases, Operating Systems, Computer Networks, Security in Information System
- **Math & Foundations:** Discrete Mathematics, Linear Algebra, Combinatorics, Probability and Statistics, Numerical Methods

PROJECTS

- **Concert Ticket Booking Platform** May 2026
System Design for Java Spring Boot Backend Service GitHub
 - Architected a robust Java 25/Spring Boot backend service designed to handle flash sales, ensuring strict data consistency and system reliability.
 - **Role & Achievements:**
 - * Engineered high-concurrency booking workflows with dual-layer overselling prevention, utilizing Redis for fast atomic decrements and PostgreSQL row-level locks.
 - * Implemented robust idempotency controls and voucher abuse protection to mitigate duplicate network retries and transactional anomalies.
 - * Orchestrated asynchronous booking queue processing via RabbitMQ and executed rigorous k6 load-testing to validate system resilience under peak traffic.
 - * Authored extensive Java integration tests covering critical flows, utilizing Docker Compose for containerized environment simulation.
- **Oracle Security & Administration App** Apr 2026
Database Management Tool GitHub
 - Developed a Java-based administration application utilizing Docker to manage Oracle 21c databases, focusing on hospital data security workflows and auditing.
 - **Role & Achievements:**
 - * Ensured adherence to security best practices by refactoring user authentication into secure PL/SQL procedures and enforcing strict Role-Based Access Control (RBAC).
 - * Actively troubleshoot and resolved critical configuration issues in Oracle ARCHIVELOG mode to maintain continuous system reliability.
 - * Engineered robust data protection and disaster recovery mechanisms using Oracle RMAN and Data Pump, documenting execution procedures for seamless handover.

MISCELLANEOUS

- **FIT@HCMUS Thach Thuc Academic Competition 2026 Qualification Round - Score: 30/50** 2026
Traditional academic competition testing comprehensive knowledge in computer science, algorithms, and core technologies.
- **HCMUS-CTF 2026 Qualification Round - Rank 3/29** 2026
Annual Capture The Flag contest by the University of Science, solving practical security challenges.

CERTIFICATIONS

- **TOEIC - Score: 800/990 (Listening and Reading) and 280/400 (Speaking and Writing)** | Issued by IIG Vietnam (May 2026)
